2: O'Shea G-3 (1944-1945) 1947 MK4 Trucial Oman MK4

chalcedony stone with a faded inscription, and had taken it to the silversmith to have it made into a ring; the purpose of his visit was to collect and pay for it, not always a simple matter in Arabia, where the merchant normally demands twice the legitimate price and expects to be beaten down.

Mahmud, who is a Baluchi and lives with his family in the poorer part of the town, took us through the less salubrious quarter. Sharjah has no city wall proper, but its place is taken by a ring of filthy hovels, the palm-thatched barousti huts of the coolies, slaves and servants. The stench from these slums is unbearable in hot weather, for each hut dweller uses his front door as a cesspool and a refuse dump, and the place is infested with flies and insects; native children crawl about in the sand, and mangy pai dogs snarl at one's approach. These miserable hovels afford protection against neither sun nor rain, and it is remarkable that their poverty-stricken inhabitants are not afflicted with disease. The quarter is a disgrace to Sharjah town and, although the Political Officer has remonstrated with the sheikh about it, he refuses to have the place rebuilt.

It was a pleasant relief to pass into the cool, dim alleys leading to the town; many of them are roofed with palm-thatch and are comparatively clean. The walls are honeycombed with doorways, leading to the houses of the tradesmen and metalsmiths. After a walk of fifteen minutes through the maze of dark, winding streets, during the progress of which we were conscious of hundreds of dark eyes staring curiously at us, we reached the sugar market. This is a large square in the centre of the town; it is roofed-in with huge strips of palm-matting, supported by whitewashed wooden pillars, making it very dim inside.

Tethered to the pillars were six camels, snarling and grumbling; occasionally they tried to rise, but their forefeet were tied together and they would hobble for a few yards and quickly fall back on their knees. They had brought bags of sugar from a boat in the harbour, and their owners were arguing over prices with the brokers. The market, which is about six hundred feet square, contains warehouses, brokers' offices and shops on each side. We should have liked to take a photograph of it, but as Sparkes had no time-exposure on his camera he decided not to risk wasting his film.

The colour and variety of dress one sees in a native bazaar is remarkable. The women are the least attractive, their trousers, wraps and veils being of an unrelieved black; it is their menfolk

high degree of resistance as the result of repeated exposure to infection. Enteritis and diarrhea are responsible for a high mortality in infancy and early childhood.

Many persons harbor at least one species of intestinal worms. Occasional cases of tapeworm infection have been recorded, but the species was not specified. Ancylostomiasis and schistosomiasis are not known to occur.

Diseases Spread Chiefly Through the Respiratory Tract

Tuberculosis is a major problem, and, as elsewhere, the poor nutrition, the overcrowded living quarters and the unhygienic habits of the people favor the spread of the infection. Pulmonary tuberculosis apparently predominates, but other forms of the disease are frequent.

Pneumonia and influenza are prominent, especially during the winter months, when the palm thatch huts provide slight protection against the changeable weather conditions. Respiratory infections are regarded as an occupational hazard among the pearling crews.

Epidemics of smallpox are recurrent, and a large percentage of the children show pockmarks indicative of previous infection. Measles, mumps, chickenpox and other respiratory diseases of childhood are endemic.

Diseases Spread or Contracted Chiefly Through Contact

Gonorrhea is widespread, and serious complications due to local methods of treatment are said to be numerous. Syphilis is common, but the extent of infection is uncertain. Cases of soft chancre also are reported.

Trachoma is one of the most frequent diseases in this area, affecting a large percentage of the population. Trichiasis, corneal ulcers and other serious manifestations of the infection are often seen. Conjunctivitis is general; many cases probably are infections in origin, and all undoubtedly are aggravated by the sand-laden winds.
